Great day! Welcome to a teeny tiny corner of the vast interwebs. My hope is that you find this particular corner *useful*. I got tired of hunting down color codes and syntax, saw that there were a surprising number of searches for "latex color," whence the solution seemed obvious.

Believe it or not, you can [leave a comment below](#), courtesy of the fine folks from Disqus.

Thank you for visiting!

I hope you were able to find exactly the colors you need for your LaTeX documents, and that your documents turn out stylish, elegant and beautiful.

All material licensed Creative Commons with the same restrictions as the Wikipedia page used for generating the source colors. Basically, do what you want with it, just make sure to link back to [Wikipedia list of colors](#) when appropriate, and if you're so inclined, perhaps a link back here as well.

And just for Google [+David Doolin...](#)
